pc00: driver, and a node like the others
lab LAN
each worker, pc01 to pc16
Systems under test: PipedPeer submitter (one of the N), Ray head, Dask scheduler
jobs, tasks, ranks
PipedPeer daemon, Ray worker, Dask workers, or a torchrun rank
OTel driver collector, OTLP on :4317; file exporter, compressed JSON lines
OTLP/gRPC, zstd
OTel node collector: host and process metrics, Ray and Dask metrics, logs
Runner: the lab day and run.sh, Ansible over ssh
commands, run id
pp-poll.py: daemon API, sockets, kernel counters, clock
File server: code, Nix binary cache, the collector binary
code, Nix paths
RAPL energy counters; tcpdump of packet headers on 4242–4244
Results: one record per run, logs, clock offsets, packet captures
pcap, at the end
pc01 pc02 pc03 pc04 pc05 pc06 pc07 pc08
pc09 pc10 pc11 pc12 pc13 pc14 pc15 pc16
cloudflare
ingest Worker: refuses uploads past the free tier
R2 bucket: raw results and telemetry
sync-r2.sh after each experiment
