PATCHED CALLS, AND WHEN THEY MAY LEAVE
Unmodified script
1
Shim, imported first
embedded in the binary, appended to the workspace
2
Pool, process executors
≥ 0.5 s of work
joblib, scikit-learn
≥ 0.5 s of work
pandas grouping, joining
cost model
NumPy products, SVD
cost model
data-parallel training
opt-in, --ddp
3
cluster faster?
yes
4
Remote: split by measured speed; late parts re-run locally
no
Local: the original function, as written
5
the same result as a local run; on any exception the original runs instead
